

Managed Print as a Service for Healthcare

Should you be concerned about the ongoing costs of your print services? Do you want to reduce costs without any disruption?

Hospitals today are seeing a significant increase in their print volumes, driven by initiatives such as EMR, Meaningful Use, the Affordable Care Act, and ICD-10. These initiatives have increased hospitals' printing related to internal documentation, claims processing and general governance. At the same time, hospitals have little visibility into what is being printed where, which leads to stockpiling of supplies and underutilized equipment.

All healthcare systems are responding to increasing demands to cut costs without affecting patient care. Every function in a hospital should be under review. Output/print environments and print-related expenses are often overlooked or low priority, though they can play a significant role in cutting costs and increasing the quality of EHRs. The conversion of U.S. hospitals from entirely paper-based to a completely digital environment still has a long way to go.

There are millions of dollars in savings available by controlling and managing print-related assets and costs.

Where to Start?

Addressing consumables waste is a good place to start. How often are supplies changed too early? Are your supply closets full of spare cartridges that you simply don't need? Up to 25% of consumables and parts are often wasted, even if you use a simple print fleet monitoring system.

What if you could reduce this loss and waste to instantly increase cost-effectiveness?

Evaluate

Before implementing any change, it's worth examining which elements are already working well. It may be that you can achieve your desired outcome but retain many of the existing processes and supplier relationships. There may be other considerations that complicate the decision process. These may be more difficult to quantify, such as carbon footprint, customer experience or employee satisfaction.

Find out how we uniquely tailor your solution, integrate into your business process and systems, and enable you to reduce costs while improving staff and clinician satisfaction with a world class Print Service.

Logicalis + You

- Consolidate data from multiple proprietary systems into a single, synchronized repository for more simplified management.
- Eliminate costly dependence on proprietary systems and reclaim your data.
- Ensure fast access to and near continuous availability of data—even when PACS and other systems are down.
- Centrally store and distribute patient data to reduce the number—and cost—of complex system interfaces.
- Incorporate intelligent retention management policies to better manage the data lifecycle and reduce risk.
- More efficiently migrate large data volumes to reduce costs and simplify your storage environment.
- Give clinicians a complete longitudinal view of the patient record for better quality care.

No Disruption

Most healthcare systems have many key stakeholders with a variety of goals or needs. Managed Print as a Service can meet their needs without disruption, making consensus much easier.

Managed Print as a Service is a cloud-based service that uses agents to automatically monitor all print activity and provide management reporting and automated alerts for ordering supplies and servicing requests. The service can discreetly monitor and recommend cost savings without changing a single supply chain component or equipment liability on your balance sheet.

Managed Print as a Service allows hospitals to:

- Quickly understand what is actually being printed, and where
- Reduce supplies costs through predictive ordering
- Reduce Help Desk costs (35-50% of Help Desk calls)
- Gain visibility to negotiate effectively with equipment and supplies vendors
- Improve user experience by automatically alerting the Help Desk for repairs
- Support all print devices, any make/model, even locally-attached

Sound Choice

Logicalis and our partners have enabled many large corporations and industry-leading service providers to deliver successful managed print projects and continues to support them in their everyday delivery. If driving cost down, improving employee productivity, and delivering an enterprise class managed print service are critical success factors for you, then you should talk to us.

Sound Process

- Use our proven TCO calculator to estimate your potential savings
- Do a 30 day Proof of Concept to demonstrate your savings
- Implement Managed Print as a Service
- Add integration to your Supply Chain or Help Desk
