

Cloud Storage for Backup

Move your backup to the cloud...without changing existing configurations.

Cloud Storage for Backup delivers high-performance, industry-leading service that can reduce costs up to 30 percent over using traditional tape backup. Seamlessly integrate with a cloud storage gateway appliance to your existing backup installation and, within hours, you can begin moving data. Mission-critical data is safely protected and stored off-site. Available as a service, with a monthly subscription, you can have better control of the cost and quality of your back-up solution.

Cloud Storage for Backup comes with everything you need to get started.

Your monthly cost includes architecting the correct solution for your backup needs and monitoring and managing of the appliance. Installation and setup of the appliance, connectivity and configuration will be charged a flat one-time fee. You can also enhance the solution by adding backup managed services for a complete end-to-end solution.

Key Benefits

- Industry-leading technology to enable cloud backup
- Fast deployment within hours
- Improved DR Readiness
- Enables quicker recovery times
- Enterprise-class security
- Predictable IT expenses based on usage
- No more tape management

Logicalis' Cloud Storage for Backup delivers high-performance, industry-leading service.

Industry-Leading Protection for Your Data

Cloud Storage for Backup combines industry-leading compression, deduplication, encryption and WAN acceleration with highly scalable, reliable, fast and affordable cloud storage to deliver the performance you are used to on-site, without changing your existing backup installation. Simply point the appliance to the target backup application, and Cloud Storage for Backup manages the deduplication, encryption and transmission of data to the cloud. No changes to jobs, policies or schedules are required.

High-Speed, Cost-Efficient Performance

Optimized for enterprise workloads, Cloud Storage for Backup deduplicates, compresses, encrypts and replicates data to cloud storage, lowering costs by up to 30 percent over disk- or tape-based systems. Datasets are compressed by 10x to 30x, on average, to speed transmission and reduce storage costs. With zero-configuration and an easy deployment, often within hours, you can begin moving data to our cloud storage immediately. No more management of tapes. Not only does this reduce capital costs and overhead, it keeps you focused on higher-priority projects that more directly impact the core business.

Fast Recovery and Superior Business Continuity

Cloud Storage for Backup not only protects vital data, but it also ensures IT continuity with fast recovery in case of data loss. A seamless connection between your backup solution and our cloud services helps you store and restore datasets with the most recent, most accessed data cached locally for fast restores. In case of disaster, our fully redundant data storage infrastructure allows you to safely and securely retrieve any amount of data, anytime—and from anywhere on the Web.

End-to-End, Enterprise-Class Data Security

Cloud Storage for Backup uses advanced, end-to-end data security with built-in redundancy to ensure that your valuable business data is protected at all times. Data is encrypted and stored in the local cache and in the cloud. During transmission, data is secured using industry-standard SSL v3 while, at rest, data is protected using advanced AES 256-bit encryption. Encryption keys are kept safely within the data center, but you can quickly restore data to any location. No physical transportation of data is required. These stringent measures reduce the risk of data loss due to theft, error or disaster. Key benefits include the following:

- **Advanced Data Protection** – Quickly and safely stores all backup data in the cloud with synchronization between the cloud and the locally cached dataset for superior data protection and fast recovery.
- **Predictable Monthly Costs** – Subscribe on an annual basis to maximize resources and better control IT costs.
- **Fast Deployment** – Deploy within hours—and without hardware or software updates or changes to your existing backup installation.
- **Lower Costs** – Uses variable segment length and in-line deduplication to find additional duplication, resulting in lower cloud storage fees and faster data transmission.
- **Superior Throughput** – Uses industry-leading WAN optimization to speed replication and gateways that optimize data and transmit in multiple, parallel streams to maximize the available bandwidth for outstanding throughput.
- **End-to-End Security** – Secures data in-flight using SSL v3 and data at rest using AES 256-bit encryption—keys are kept safely within the data center—allowing data to be restored to any location.
- **Anytime, Anywhere Data Access** – Objects written multiple times per cluster, with auto-healing capabilities in case of drive failure.
