

# We built the Logicalis Enterprise Cloud to be everything you could possibly want in a data center or disaster recovery site, so you wouldn't have to build it for yourself. Our cloud platform can be your silver lining.

## **The Logicalis Enterprise Cloud**

Logicalis Enterprise Cloud is a multi-tiered cloud infrastructure built on a set of predefined services with flexible support levels designed to meet your exact needs.

The Logicalis Enterprise Cloud is built on VMware virtualization technology, Cisco virtual fabric technologies, and hardware platforms from our top-tier vendor partners. It is designed to deliver scalable enterprise-class computing and advanced enterprise services. It leverages the cost savings of a shared, virtual cloud solution.

Logicalis draws on more than a decade of experience providing enterprise-class monitoring and management to ensure reliable service 24x7 for the most demanding enterprise applications.

## **Logicalis Enterprise Cloud Features**

Logicalis designed its cloud platform to support multiple operating environments. IT is SAS70 certified, and has implemented safeguards that are in line with HIPPA and other regulations.

The infrastructure underlying the platform incorporates ITIL V3 best management practices; it is designed for complete redundancy, leveraging enterprise-class servers, storage and networking infrastructure.

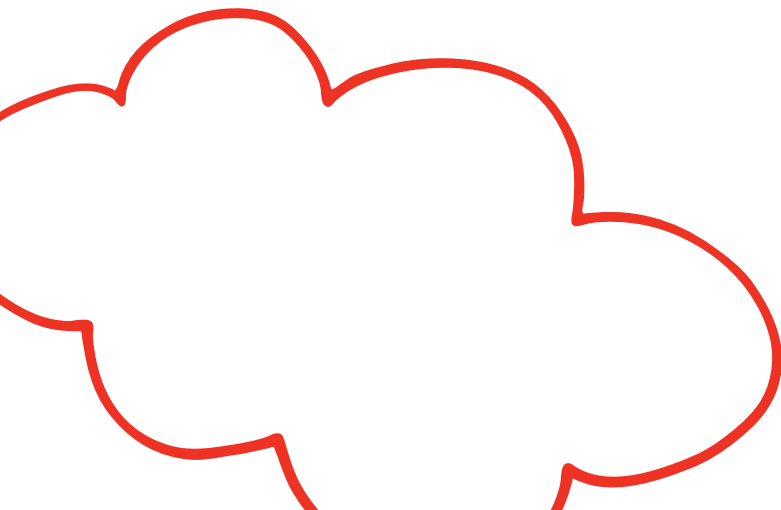

## **Key Offerings**

### **Infrastructure as a Service**

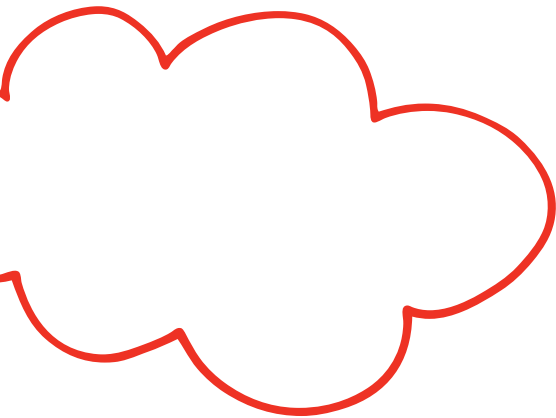

- Hosted Windows, Linux, AIX & i5/OS Virtual Servers
- WAN Acceleration
- Load Balancing
- Disaster Recovery as a Service

### **Software as a Service**

- SaaS Single Sign On (Federated AD)
- Hosted Exchange
- ITSM as a Service

# The Logicalis Enterprise Cloud platform makes all the benefits of cloud computing and managed services available to you on demand. We are your data center in the cloud.

### Customer Experiences

**API Healthcare** is an independent software vendor (ISV) offering a comprehensive time management/workflow system to healthcare organizations of all sizes.

API's clients had begun asking about a software-as-a-service (SaaS) version of its application that API would host. The problem for API was providing their software as a service would mean building up its own data center, not its core competency.

There was a better way: Logicalis created a container within its Logicalis Enterprise Cloud that provided API with an enterprise-class, ITIL-based platform that was in line with HIPPA regulations and included infrastructure, memory, storage, processing and network capacity, as well as monitoring, maintenance and managed services. This made it possible for API to provide its applications with a high-level of availability and reliability.

**Total Safety** of Houston is a leading global provider of integrated industrial safety services, strategies and equipment. An organization with an intense focus on safety, Total Safety was acutely aware of the risks it faced by having its data center in "hurricane alley."

A comprehensive disaster recovery assessment showed that the only way to provide a totally safe data center environment would be to build a duplicate disaster recovery site outside Houston.

*There was a better way:* Logicalis created a disaster recovery site within a cloud container at its Tier 3 data center and replicated Total Safety's systems to this site.

The Logicalis cloud platform eliminated the risk of downtime and enabled the entire cost of the disaster recovery platform to be paid from its operational expense budget instead of its capital expense budget. Total Safety also received the benefit of Logicalis' more than 10 years of experience as a managed services provider.
