

Mobility Solutions from Logicalis take the complexity out of communication, increase productivity, and enhance customer responsiveness.

Mobility Solutions

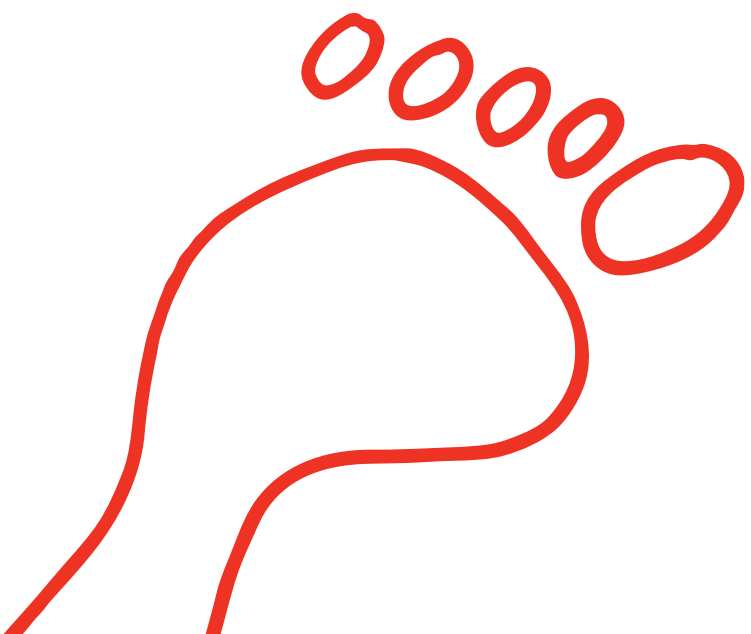

Companies whose success depends directly on how well they handle the subtle intricacies of customer and employee relations are drawn to the immediate responsiveness of Logicalis' Mobility Services.

With mobility solutions, employees, partners, and customers can conduct business anywhere, anytime, from any device. Logicalis mobility solutions unify mobility networks, secure and manage mobile devices, and create an open ecosystem for your mobility applications. You can even implement mobility across personal, private, and public networks, delivering a consistent mobility experience.

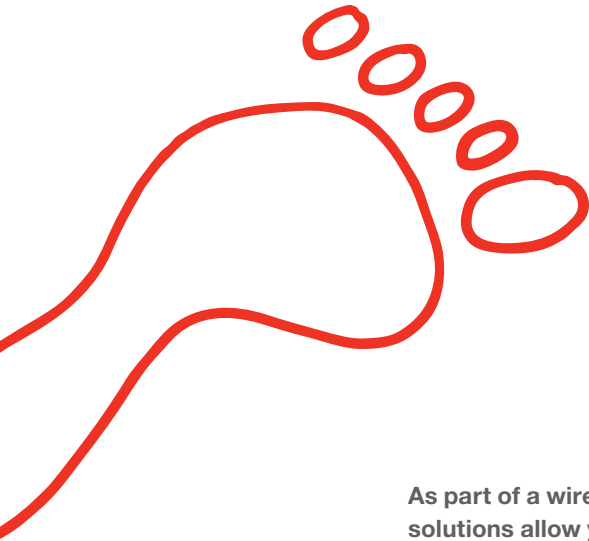

Mobility provides the interface between all unified communications capabilities.

For example, mobility...

- Allows you to redirect incoming IP calls between a selection of designated client devices, such as cell phones or IP phones. Anyone who has been stuck at a desk phone when he or she needs to drive to the airport will appreciate being able to switch seamlessly between an office phone and a cell phone, and vice versa, without interrupting the call.
- Enables instant messaging (IM) without the lag associated with email or voicemail. An IM connection can also be easily upgraded to a full-fledged Web-based audio/video conference.
- Collects information about availability status and communications capabilities, whether by phone, Web, or videoconference. You always know who is available and how to best reach them.

“Logicalis became our partner to provide key IT functionality so we could focus on building our business.”

As part of a wireless strategy, mobility solutions allow you to:

- Rapidly deploy reliable, secure mobility infrastructures
- Reduce network maintenance and communications costs
- Gain a high-speed communications system that is extensible to mobile workers
- Boost productivity of field sales, public service, and customer support professionals
- Improve overall organizational responsiveness to gain a competitive advantage

PBX, IPT, cell phones, Internet phones, WiFi, email, voicemail, fax—the diverse assortment of communication devices available today can be a minefield of conflicting protocols and interfaces for IT.

Mobility Solutions from Logicalis takes the complexity out of communication.

Unified Communications Offerings

Logicalis' Mobility service is part of our larger Unified Communications offering, which also includes:

Collaborative Applications – Integrating voice, video, and Web capabilities as part of work, training or contract review sessions, sales presentations, and brainstorming meetings.

Email – Reducing the complexity, cost, and resources required to manage your messaging environment.

Networking – Supporting and developing solutions for secure wired and wireless routing, switching, and network management.

VoIP – Unifying voice, video, data, and mobile applications on fixed and mobile networks enables users to easily communicate in any workspace using any media, device, or operating system.
