

VoIP solutions from Logicalis help organizations realize greater security, resilience, and scalability on a converged network for transport and interconnection.

VoIP

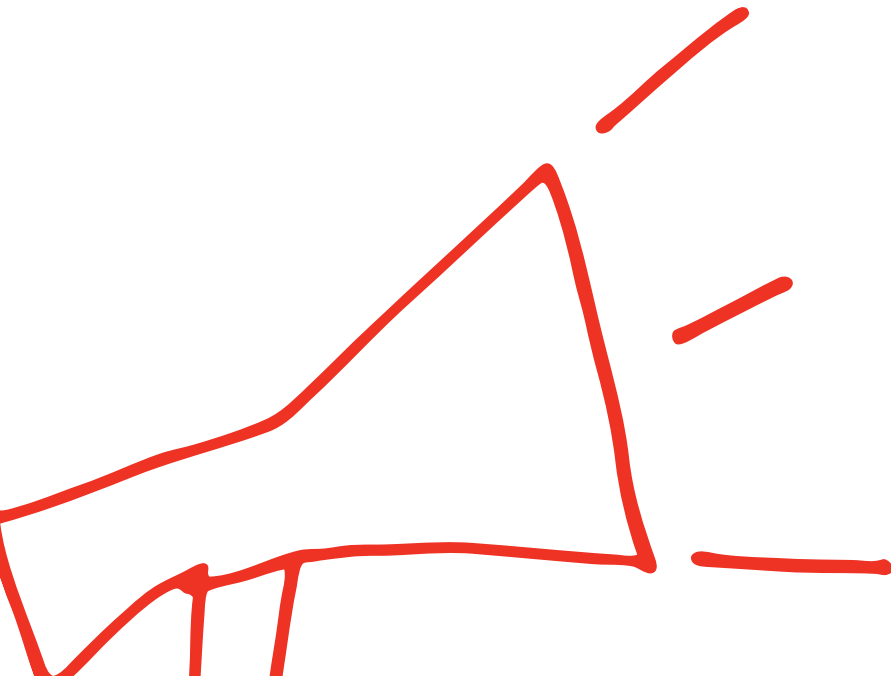

Logicalis' VoIP service allows you to extend consistent communications services to everyone in your organization, whether they're at corporate headquarters or branch offices, working remotely or via mobile. Our VoIP solutions unify voice, video, data, and mobile applications on fixed and mobile networks and enable users to easily communicate in any workspace using any media, device, or operating system.

Using the network as the platform, VoIP solutions from Logicalis help organizations of all sizes realize greater security, resilience, and scalability on a converged network.

VoIP offers technology transitions that facilitate migrating from legacy PBX systems to VoIP and include upgrading and expanding corporate networks and integrating branch offices or acquired companies into a single voice and data network.

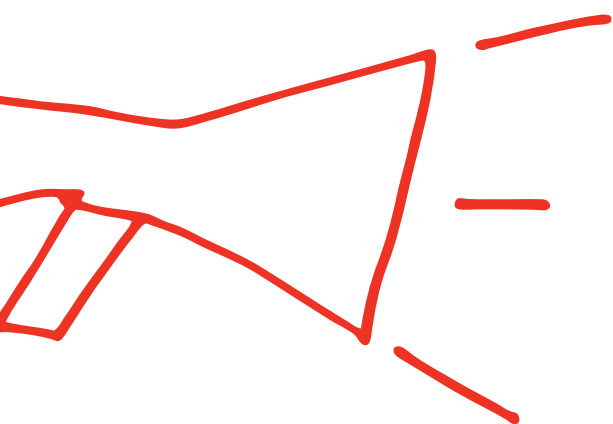

VoIP Benefits

- Voice and data integration on a single network
- Greater user mobility
- Simplified moves, additions, and changes
- A single point of access for email and voicemail
- Enhanced fault tolerance and business continuity
- Reduced telecom costs
- Virtual call centers

Ken Plummer
Vice President of
Information Systems,
AMEC

“I can buy Cisco equipment anywhere. What I can't get just anywhere are people who understand how we want to run that Cisco equipment. Logicalis can do it all, or they can do just as much as we want them to. That is important because it provides me with a lot of flexibility.”

Offerings

Logicalis' VoIP service is part of our larger Unified Communications offering, which also includes:

Collaborative Applications – Integrating voice, video, and Web capabilities as part of work, training, or contract review sessions, sales presentations, and brainstorming meetings.

Email – Reducing the complexity, cost, and resources required to manage your messaging environment.

Mobility – Extending unified communications features seamlessly from the desktop to wherever you are.

Networking – Supporting and developing solutions for secure wired and wireless routing, switching, and network management.

Case Study – AMEC

A world leader in technical services and project management, AMEC designs, delivers, and supports its customers' capital assets around the world. When AMEC was ready to begin upgrading its offices in North America from legacy PBX to VoIP, it wanted a partner with a depth of expertise for whom all of North America could be considered local.

Logicalis was that partner. Logicalis took less than a week to assess AMEC's situation, which entailed installing an infrastructure to support 300 IP phones in a new office building in Tucker, GA, and then in eight locations throughout North America.
