

LOGICALIS **WEB SERVICES** IS A BUSINESS-CENTRIC APPROACH TO APPLICATIONS THAT SUPPORTS INTEGRATING YOUR BUSINESS APPLICATIONS AS LINKED, REPEATABLE BUSINESS TASKS.

WEB SERVICES

For all their individual capabilities, many mission-critical applications in IT environments today don't have any effective way to interact with each other; the result is that corporate data—potentially the most valuable asset in any corporation—is fragmented into silos that contain data instead of sharing it.

Communication, as a result, is constrained between different departments within an organization—stifling collaboration. Advances in Web services now provide the technology to launch a new era of diplomacy among the applications in your IT infrastructure.

Implementing a Web services strategy with Logicalis:

Improves alignment between IT and your line-of-business while generating more IT flexibility to support greater business flexibility.

Facilitates reuse of your existing IT investments as well as the new services you're developing today.

Ensures integration of your IT investments by making use of well-defined interfaces between services.

Reduces costs and improves customer satisfaction by providing an architectural model for integrating business partners', customers', and suppliers' services into an enterprise's business processes.

Reduces business risk and exposure by helping you comply with proliferating regulations.

“Having them [Logicalis] as an extension of our team saves us money and time. Our developers don’t have to get frustrated and fume and try to find solutions. They can just call Logicalis developers and say, ‘Here is what I want. What can we do?’”

David Hinkley, Border States Electronics

SAAS ENABLEMENT

More companies today are evaluating and migrating to applications delivered as Software as a Service (SaaS), also known as “cloud” computing. SaaS can relieve many of the challenging demands of traditional applications, but it still requires strategic management and planning to achieve desired results. To help customers achieve the level of service they require from SaaS environments, Logicalis also provides strategic enablement and planning services for SaaS.

Through our Outsourcing Service, Logicalis also offers a variety of hosted, on-demand applications in the SaaS model, including email, IT Contract Management, IT Service Management, and System and Infrastructure Monitoring.

ADDITIONAL APPLICATION SERVICES FROM LOGICALIS

Application Development — Our application development specialists can help you leverage data located in disparate, disconnected applications and enable them to interact and collaborate with each other efficiently and effectively.

Business Intelligence — We help you implement data management strategies that integrate applications and technologies, provide access to data, and give you the ability to analyze this data.

Portals — Build stronger links to customers, extend your company to partners, and provide deeper data access to employees with our Portal Services.

WHAT CAN WE DO FOR YOUR ORGANIZATION?
