LOGICALIS C3 CLOUD PLATFORM

Logicalis' Enterprise Cloud is broken down into a defined flexible compute container. Within each container, a customer selects what platform system they would like to run within the Cloud. The platform system is a managed hosted virtual operation environment that is run within the container. The flexible compute container is designed to support multiple virtual operation environments. Your compute container is your own virtual private cloud that resides in the Logicalis Enterprise cloud.

Some clients may choose to utilize the flexible compute container and match it with their private cloud. The benefit of the flexible compute container is that it is burstable and capable of handling peaks in performance.
