K-12 Schools

Technology Solutions

Like so many precocious Trojan Horses, students today are bringing change into their schools with the growing assortment of smart phones, tablets, watches and other digital devices they tuck in their back pockets and book bags.

K-12 IT Priorities

1. Personalized Learning
2. Digital Content & Curriculum
3. Professional Development
4. Online Testing
5. Mobility, and Common Core/ State Standards
6. Networking Infrastructure Upgrades
7. Cybersecurity and Data Security Tools
8. Student Data Privacy
9. Data Management/ Analytics
10. Cybersecurity Policy

Overview

As the list of K-12 IT priorities on this page shows, the transition from the traditional, analog classroom to a fully digital educational environment brings many new challenges. Innovative use of technology, at the same time, provides a tremendous opportunity to connect with students and help them learn on a one-to-one basis.

The Logicalis GovEd Practice draws on the combined skills and experience of our entire organization to help schools use technology to enhance and protect the learning experience in a way that is both innovative and manageable. We have the right tools, the right vendor partners and the right people to help your school system get top grades in the mandatory course in the digital transformation of the educational experience.

Our Solutions

Personalized Learning

Logicalis works with school systems across the country to design technology systems to provide an educational experience that is tailored to each individual student. But just as all students are different, so are all school systems. You may have already implemented some version of a flipped classroom, or blended learning environment. With our personalized approach we assess your current needs and design a technology roadmap to reach your educational vision for your school system.

Professional Development

Logicalis helps schools provide the same technology- assisted benefits of personalized learning to teachers who become students to meet professional development requirements. We assess current professional development requirements and help with digitized educational modules that teachers can access on the school's server from any device, anywhere any time. There is no better way to understand education's digital transformation than to participate in it as a student as well as a teacher.

“We relied very heavily on the expertise of Logicalis and without their experience in network design and facilities construction we would have made many of the mistakes some schools are making today.”

Betty Olivier, Technology Director
Wilson School District

Logicalis GovEd

Procurement Contracts

We understand that you need to comply with regional procurement policies when you acquire technology solutions. Our procurement contract specialists ensure that we have a contract position that enables us to participate in as many contract vehicles as possible in each state, including:

- State Contracts
- Direct Manufacturer Contracts
- Consortium Contracts (like NASPO-Value Point)
- E-Rate Contracts

What we can do for your organization?

Mobility and Security

With every student bringing as many as four digital devices to school, administrators are facing network and wireless bandwidth demands that rival major corporations. We help schools determine their bandwidth requirements and develop systems to confirm identities, segregate traffic, manage app use and mitigate congestion.

Digital Classroom

Students who arrive in class with 21st century multimedia technology in their back pockets are generally not impressed when the teacher turns on the distinctly 20th century overhead LCD projector. Logicalis helps schools provide a state-of-the-art multimedia experience that teachers can operate with the flip of a switch. Teachers are also able to get real time feedback from the laptops and tablets students are using at their desks and can respond proactively when a student is struggling. The technology is available today to digitize everything that has previously been done manually in the classroom. We help teachers make the classroom as smart...or a little smarter...than their students' devices.

Why Logicalis

Expertise and Experience

Logicalis has hundreds of active customers in education and government across the U.S. We understand the unique challenges of working in the public sector and bring our understanding of the entire IT infrastructure from mobile device to cloud computing to help customers like you accomplish your priorities. Whether you want to enhance personalized learning in the classroom or implement digitization in the courthouse, we have experience delivering results that will exceed your expectations, not your budget.

Consultative Approach

Our approach is always consultative. We listen. Before we say anything about technology, we take the time to understand your unique situation, your challenges, your goals, your people, your vision. We don't just sell you technology. We help you assess, design, build and manage solutions that express your objectives. Our customer retention and high ranking on independent customer satisfaction surveys reflects our commitment to our customers' success.

Physical Security

Digital security systems that are centrally managed and dispersed strategically throughout the school campus are an urgent priority in all schools today. Logicalis helps schools provide physical security three ways:

1. Video surveillance — Digital video systems provide unblinking, real-time visual access to your entire campus.
2. Access control — Centrally managed electronic door locks and card badge readers ensure that only the right people have access to your school.
3. Emergency notification — When triggered by an authorized official, emergency notification systems can instantly push approved messaging to every IP phone and digital display in the school as well as to local police and parents. Follow up messages keep everyone informed.
