Logicalis + VMware

vRealize Suite

Manage hybrid and multicloud environments, regardless of vendor, with a comprehensive cloud management platform that increases IT agility, efficiency and control.

Overview

The promise of hybrid cloud for greater agility and cost efficiency is nearly infinite, yet there remains a key challenge: how to simply manage hybrid and multicloud environments, along with your virtual machines, applications, data and resources as one instead of having separate platforms.

Here is where a management platform like VMware vRealize Suite can help. This comprehensive cloud management platform can run your IT services no matter where they reside or what vendor they're from: on premises, in the public cloud or a hybrid approach. It delivers greater agility, efficiency, control and choice for traditional and containerized applications.

Boost productivity of IT and development teams

Logicalis helps IT and development teams become more productive and meet business requirements by using industry-leading vRealize Suite to enable cloud choice and deliver consistent operations across hybrid and multicloud environments.

These solutions speed up the delivery of IT services through automation and pre-defined policies, providing high levels of agility and flexibility for developers and lines of business while maintaining IT governance and control.

Work faster and work autonomously

vRealize Suite operates on three core capabilities:

- Applications Operations – Enables developers and dev/ops teams to release code faster and more frequently.
- Programmable Provisioning – Helps developers work autonomously while IT maintains governance.
- Self-Driving Operations – Helps IT run operations hands off and hassle free.

Use Cases

- *Intelligent, Self-Driving Operations* – Continuously optimize capacity and performance, as well as IT infrastructure spending, across multiple cloud environments based on business and operational intent
- *Self-Service IT Automation* – Reduce response time for IT services and improve the ongoing management with an easy-to-use, unified self-service cloud infrastructure consumption layer.
- *DevOps for infrastructure* – Enable IT with DevOps-powered infrastructure delivery and consumption use cases, leveraging infrastructure-as-code, VMware Cloud Templates, infrastructure pipelining and GitOps.

Related Solutions

vRealize Suite includes:

- **vRealize Lifecycle Manager** – Enable single pane of glass management to perform software upgrades, patching and driver updates of software, operating systems, hosts and hardware.
- **vRealize Log Insight** – Enable real-time log management for real-time answers to problems related to systems, services and applications across physical, virtual and cloud environments.
- **vRealize Automation** – Automate provisioning and resource maintenance through the creation of blueprints (models) that include all the components of requested services along with their relationships, including a mix of VM and container-based services.
- **vRealize Operations** – Get a unified view of health and utilization, automated performance management, accelerated capacity and planning decisions and proactive discovery of issues before they impact users.

Services

Logicalis offers complete professional, consulting and advisory services for the data center, including:

- Assessments
- Infrastructure Application Rationalization
- Professional & Consulting Services
- Design, Integration & Deployment
- Workload Migration
- DevOps & Automation
- Managed Services
- Service Desk

Benefits

- **Enable ample agility** – Accelerate IT services delivery to business units' needs.
- **Increase IT efficiency** – Boost IT team efficiency and achieve better utilization of IT resources for lower CapEx and OpEx.
- **Optimize performance and availability** – Proactively identify and resolve issues with predictive analytics and smart alerts, ensuring optimal performance and availability.
- **Ensure governance and control** – Balance agility, risk and cost by giving IT teams the right level of control.
- **Greater choice** – Empower users to consume infrastructure resources using their choice of simple, easy-to-use tools.
- **Improve business-IT alignment** – provide visibility into IT operations and costs to achieve tighter business-IT alignment.
