Network Security Solutions

Protect the integrity, usability and reliability of your enterprise network with Network Security Solutions that control and examine network traffic for threats, behavioral anomalies, exploits and malware, and provide proper network segmentation.

Overview

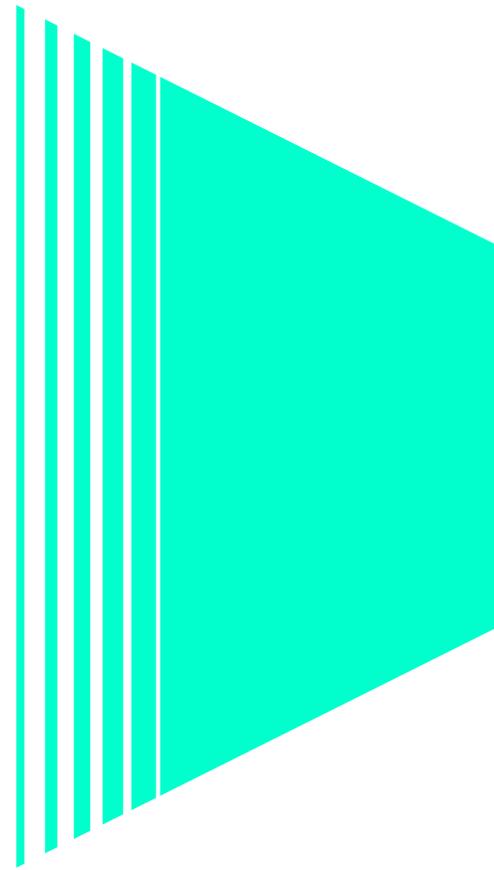

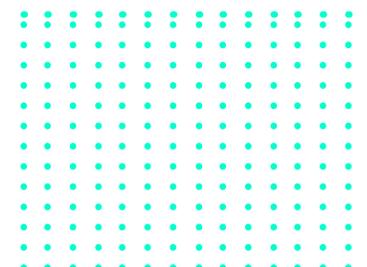

Today's expanding enterprise network presents challenges to traditional network security approaches. It's no longer enough to secure the perimeter of your corporate network. With end users using desktop and mobile devices in the office and remotely, servers in the data center and the cloud, and new IoT devices at the edge, you need to deliver network security that transcends traditional authentication. Modern security threats and exploits demand multiple layers of defense that protect the integrity, usability and reliability of your enterprise network by controlling and examining network traffic for threats, behavioral anomalies, exploits and malware, plus proper network segmentation, to protect customer networks and their resources.

Logicalis Network Security Solutions are based on a strong yet flexible security architecture and roadmap for the future that delivers a practical approach to the Zero Trust security model, offering CIOs, CISOs and IT teams a greater level of control into the access rights of users, devices, applications and enterprise resources through identity, user roles and requirements, and behaviors to secure networks, devices, applications, and data.

Our Network Security Solutions use a security maturity model that can help you determine your requirements based on what you currently have in place and your business needs. Then we work with you develop a practical roadmap for improving your security posture that leverages your existing security technologies investments.

"As security leaders seek to protect their networks from attacks and breaches, they are finding that network security approaches based on datacenter perimeter security using a collection of security appliances are ill-suited to address the dynamic needs of a modern digital business and its distributed digital workforce."¹

Network Security Solutions

Get a practical set of solutions designed to integrate with your environment and provide you with a roadmap for improving your overall security posture over time.

- DNS Security
- Vulnerability Assessment
- Next Generation Firewall
- Multifactor Authentication
- Wireless Security
- Secure Email Gateway
- Secure Remote Access (with & without VPN including trustworthiness validation)
- Network Level Access Control
- Segmentation across: Data Center, WAN, Campus, Cloud
- Advanced Firewall / Intrusion
- Secure Web Gateway
- Web Application Firewall
- Network Flow Analytics
- Security Information & Event Management

Services

- Professional & Consulting Services
- Implementation & Integration
- Support & Maintenance
- Training
- Managed Services

Benefits

- **More than a point solution.** Build a platform for enterprise security – Logicalis Network Security Solutions provide practical security tools that work with your existing security and can help take you to the next level in the Logicalis Security Maturity model.
- **A modern security solution for today's cybersecurity threats.** Logicalis Network Security Solutions focus on network traffic behaviors and actions to determine whether your network may be vulnerable and at risk.
- **A practical approach to enterprise security.** We recognize that you can't simply "rip and replace" the infrastructure and security architecture you currently have in place. Instead, we work with you to develop a specific plan and roadmap for improvement to increase your level of security maturity according to our four-level, Logicalis Security Maturity Model.
- **A practical roadmap for security improvement.** Our Logicalis Security Maturity Survey helps you learn about your organization's current security posture, then follow a roadmap for the future.
- **A comprehensive model for enterprise security.** Logicalis delivers comprehensive enterprise security services, including Endpoint, Network, Cloud, and Advisory Services (for Governance, Compliance and Risk).

Experienced Logicalis professionals work closely with you to thoroughly understand and define your needs and objectives. We'll help you fairly evaluate all your options and costs and then our highly certified engineers will design and customize a set of Network Security Solutions that precisely fits your organization. Our goal is that you achieve your desired business outcomes.
