# SD-WAN Solutions

Deliver the consistent, predictable performance, and stronger experiences your customers and employees demand from your wide area network with intelligent SD-WAN Solutions that simplify, manage, and optimize your networks.

## Overview

Today's enterprise network reaches across the data center, hybrid clouds and branch locations to deliver traffic for voice, streaming video, and critical business applications. This requires a modern, intelligent, and software-driven solution that automatically adapts to changing conditions and routes traffic around problems – without the need for direct IT intervention and more cost-efficiently than traditional WAN solutions.

Logicalis Software-Defined Wide Area Network (SD-WAN) Solutions help simplify, manage, and optimize wide area networks to deliver consistent, predictable performance, driving stronger experiences for your customers and employees across your geographically dispersed enterprise network. SD-WAN provides greater bandwidth at lower cost, prioritizes traffic for voice, video, and critical business applications, prevents back-hauling of cloud applications, and delivers centrally managed policies and configurations. Plus, you can leverage SD-WAN solutions to help connect employees to the cloud directly from the network.

Additionally, Logicalis SD-WAN Solutions integrate Secure Access Service Edge (SASE) architecture which combines networking and security functions, enabling customer enterprises to connect users to services securely. Trust Logicalis to help you grow your businesses with agile, adaptable, intelligent networks.
