Unified Communications & Cloud Calling Solutions

In today's modern enterprise, the personal connection of voice and video matters even more to employees communicating at the office, on the road, and from remote locations.

Overview

Today's modern enterprise is fluid. Your employees are working at the office, on the road, and increasingly, from remote locations. All while attempting to conduct company business and maintain personal connections among their teams and customers. This hybrid environment requires modern calling technologies built to meet today's enterprise communications needs. Plus, it adds pressure to increase agility, stay current, reduce total cost of ownership (TCO), raise productivity, and add intelligence for your organization. Are you ready?

Logicalis Unified Communications & Cloud Calling Solutions deliver modern communication capabilities, including voice, video, and chat, while providing support for legacy telephony features. Our cost-effective and easy-to-manage cloud and teams voice solutions enable communications for hybrid workspaces including home, office and mobile environments. Our advanced cloud communication solutions provide you with the business agility your organization needs to compete in a digitally transformed global market. We can help you with your present and future needs by leveraging your existing IT assets, and helping you assess and select future technologies and solutions.

Based on award-winning technologies from Microsoft, a top choice in the Gartner Magic Quadrant for Unified Communications as a Service (UCaaS), Logicalis provides customers with flexibility for today's hybrid and mixed technology environments, including scenarios for on-premises and cloud calling, or Microsoft Teams.

Work-from-Wherever Goes Mainstream

"31% of companies want to use UCaaS to drop technical debt from legacy systems and processes."

Benefits

No matter your industry or environment, unified communications and cloud calling and unified calling as a service (UCaaS) offers significant benefits to providing a better working environment.

- *Shift from a CapEx to OpEx cost model* – Instead of investing in more hardware, which is often tough to justify with today's tight IT budgets, shift your costs to more flexible operating budgets which are easier to manage and control. It's also more cost effective to provide PBX service from within a shared data center environment.
- *Enjoy the latest features* – Instead of waiting until there's time, money or reason to upgrade your existing UC system, obtain all the latest features as soon as they're available. You can often take advantage of new functionality right away.
- *Quickly provision new users or offices* – It's also easy to deploy services as they're needed, whether for new employees or building out new offices—or de-provisioning services for exiting employees and office closures.
- *Trust that your data is secure* – Data center providers would not be in business if they didn't employ stringent security measures and top-notch security experts who continuously monitor their networks for vulnerabilities and threats. The cloud offers the utmost in security for your UC platform.
- *Get predictable pricing* – A consumption model offers predictable, pay-as-you-go pricing for what you use—and, in many cases, you can take advantage of consolidated licensing plans that are much easier to manage.
