Vulnerability Assessment

Security teams must have the ability to pinpoint high risk security vulnerabilities mapped to business requirements, with a quick path to remediation.

While it is impossible to address all vulnerabilities, security teams must pinpoint which pose the highest risk to their organizations. Industry recognized cyber security frameworks such as NIST CSF and CIS Controls specifically call out Vulnerability Management in order to remediate and minimize the window of opportunity for attackers.

Overview

The Logicalis Vulnerability Assessment service is designed to provide a proactive way to review and remediate vulnerabilities in your environment. The assessment reviews correlated external threat indicators against your internal vulnerabilities and IT asset data. This powerful data set layers real time threat information on top of vulnerability detections, and delivers actionable recommendations, allowing you to eliminate the most serious threats in your IT environment.

Deliverable
- Full vulnerability scan report
- Top 5 threats with remediation recommendations and costs
- Roadmap on other critical areas to address
- Business Impact Analysis Workshop

Benefits

- *Vulnerability without costly tool purchases* – Eliminates the need to invest in tools to perform regular reviews of your vulnerabilities

- *Access to security experts* – Logicalis certified security experts available to you to interpret vulnerability results

- *Proactive reviews* – ability to schedule a scan and assessment based on your business requirements

- *Patching efficiency* - Saves you time and helps you make the best use of your remediation resources

- *Roadmap viewpoint* – get a roadmap that will strengthen your security posture for the future
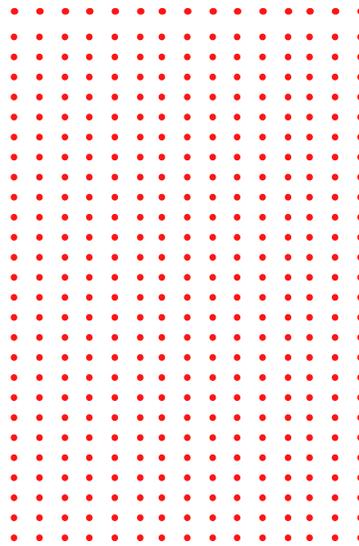

How It Works

Kick Off Meeting: During the kickoff meeting, we will meet with you to define your requirements and areas of focus based on your business priorities. We will follow a documented Q & A process that will help us pinpoint what is most important to you and the areas that could have the greatest risk or threat impact. We will also make sure we identify all the stakeholders that need to be engaged during the assessment process.

Tool Implementation and Scan: Our certified security experts will install the scanning tool to gather data. This process will take 5-7 days and will generate a thorough review of your defined environment.

Post Assessment Workshop: After all the data is collected, we will schedule a 1-hour workshop with all stakeholders to review what information was discovered, including top vulnerabilities. We will then validate or redefine the focused business risk areas outlined in the kickoff meetings that will allow us to prepare the remediation and roadmap recommendation.

Next Steps and Business Impact Analysis Workshop: This 2-hour workshop the Logicalis security engineer, alongside your primary stakeholder, will perform a readout of our findings. Together we will discuss the results of the assessment and assist you in prioritizing the remediation of those vulnerabilities which would be likely to deliver the greatest improvement on your security posture. The goal of this workshop is to provide you and your teams with a roadmap to build a sustainable vulnerability management program and to help you reduce your attack surface using industry recognized security hygiene practices. Additionally, our certified Solution Architects will offer recommendations for solutions and use cases tailored to your unique business challenges.

Why Logicalis

Logicalis takes a comprehensive approach to security. Our security policy begins with the idea that security must enable "yes," not facilitate "no." We leverage proven, industry-standard cybersecurity frameworks that will allow you to look at security from both a risk-centric perspective and a threat-centric perspective. Leveraging your existing investments, we take a holistic architectural approach to security infrastructure that will put you in the best position to protect your business.
