

Logicalis Cloud Solutions for Software Providers

Our customer-driven, consultative approach to cloud computing allows us to partner with you as an extension of your team to build a cloud strategy that will grow your business your way.

You Choose

Our cloud and cloud services are designed to help you leverage the full potential of cloud computing in whatever configuration works best for you.

We are cloud and IT operations experts with core competencies in cloud, managed services, service management and automation and orchestration, DevOps and continuous delivery.

DevOps Friendly

All our cloud services are DevOps friendly. Take advantage of on demand, unmanaged cloud for development, testing and QA, for example, and, when you're ready, use our SDDC skills to automatically promote your applications to a fully managed and secure production environment of your choice.

Our Cloud—The Logicalis Enterprise Cloud Framework is the easy button for all your infrastructure needs. Built on a set of pre-defined services with flexible support levels, the Enterprise Cloud Framework combines all the benefits of cloud computing and managed services.

Our global reach and high level partnerships mean that we have access to more than 20 highly secure, enterprise cloud facilities around the world, including our own facilities in the US and the UK, as well as IBM Softlayer, and Microsoft Azure cloud centers in Asia Pacific, Europe and South America.

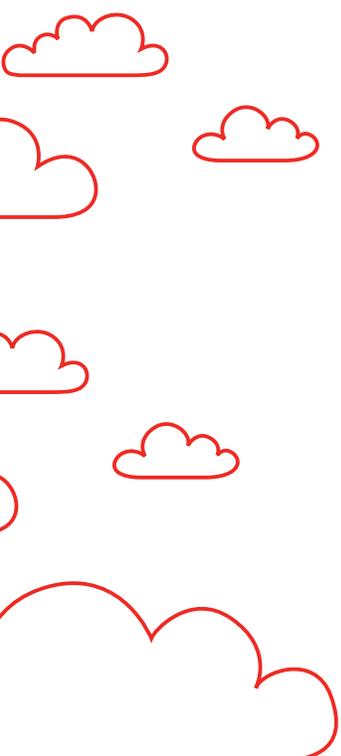

Logicalis has a suite of cloud solutions and services that can be delivered on top of SoftLayer clouds to help you manage multiple cloud resources and fast deployments of IT infrastructure internationally.

Your Cloud—We have the skills, experience and high-level partnerships to help you build your own private cloud environment in your own data center, or a colo or hosted environment. Depending on your needs, you can buy the gear with your own capital funds or lease the gear with opex funds. We can also help you extend your private cloud to leverage the efficiencies and capabilities of our cloud and other public clouds.

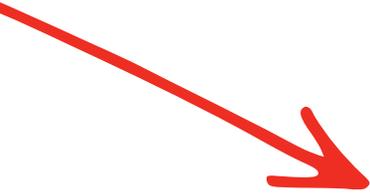

Their Cloud—If you are using public clouds like Amazon AWS, Azure Google and SoftLayer for test dev, we can help you take full advantage of the capabilities of these public cloud environments. We can also help you with application portability so you never get locked in to a public cloud and can relocate to take advantage of lower costs and/or better features.

Let us show you how our customer-driven, consultative approach can help you accomplish your technology and business objectives.

We are vendor and cloud agnostic, so our focus is always on your success.

What our customers say:

“Being able to offer cloud hosting and managed services gives our customers the choice between owning and managing their own IT infrastructure on premises, or having us handle all of that in the cloud. For us, it’s turned out to be a great way to enhance customer satisfaction and loyalty.”

Rick Veague, CTO
IFS North America

“It was a great fit for us organizationally. Logicalis has been everything we thought a cloud provider should be—and more. They’ve been so willing to work with us every step of the way. It’s a great relationship. Logicalis is a true partner.”

Jon Hardenbrook
Technical Product Manager
API Healthcare

“I’m just like my customers. They want a black box solution. They don’t care how it happens. They just want me to get them what they need in the timeframe they need it...Logicalis did [that] for me.”

Mick Kowitz
CTO and Co-Founder
ClinGenuity
