Security Advisory Services

Logicalis helps our customers optimize their cybersecurity strategy by identifying, monitoring, and mitigating real-world threats.

Overview

Every industry cybersecurity impact report revolves around a common theme: despite heightened attention and unprecedented levels of security investment, the number of cyber incidents — and their associated costs — continues to rise.

As enterprises and government agencies increasingly adopt cloud, mobile, and social platforms the underlying information technology environments are becoming more difficult to defend. Healthcare, manufacturing, education, and government systems are increasingly more connected and vulnerable.

To that end, many organizations are considering significant investments in their cybersecurity people, process, and technical controls. However, organizations struggle to ensure that those investments are optimized both to protect what is most important and prevent unnecessary functional overlap. Cybersecurity point-solutions are biased, budgets are limited, and organizations do not have the time nor the depth of experience to analyze the optimal path for adoption. Lastly,

no organization wants to be caught in the trap of "purchasing a $1,000 safe to protect a $100 bill."

Fortunately, Logicalis is here to help. We have designed a risk and threat-centric approach to security management and are using this approach to help organizations optimize their cybersecurity enhancement efforts and investments by identifying and mitigating real-world cybersecurity risks that threaten their valuable assets. Additionally, these services include scoring technology that allows for organizations to quantify their security risk to better evaluate and monitor their cybersecurity program, and perhaps more importantly, to report the health of their program more accurately to business stakeholders.

In summary, our services work to ensure reasonable, appropriate and efficient cybersecurity technology investment, ensure business stakeholder acceptance and visibility, and materially improve security posture to mitigate unauthorized access, system compromise, and data breach.

Benefits

- Create an execution roadmap that is business aligned and actionable

- Ensure security investments are optimized, effective, and efficient

- Establish a baseline maturity score and ability to demonstrate improvement over time along with ranking relative to industry peers

- Provide organizations a representation of security posture as a competitive differentiator

How It Works

- Use a phased approach based on organizational maturity, applicable regulatory compliance, budget, and risk appetite

- Perform comprehensive risk and control assessments to develop detailed remediation plans

- Perform security testing to validate control improvements

- Use risk and control scoring technology to quantify security posture and measure improvement

- Build formal policy and processes to comprehensively manage your security program

Why Logicalis?

Logicalis has a comprehensive approach to security. Our security policy begins with the idea that security must enable "yes," not facilitate "no." We leverage proven, industry-standard cybersecurity frameworks that allow you to look at security from both risk-centric and threat-centric perspectives. Leveraging your existing investments, we take a holistic architectural approach to security infrastructure to put you in the best position to protect your business.

Logicalis is an international solution provider of digital services currently accelerating the digital transformation of its 10,000 customers around the world. As Architects of Change™, Logicalis' focus is to design, support, and execute customers' digital transformation by bringing together their vision with its technological expertise and industry insights. Our deep knowledge in key focus areas such as Security, Cloud, Data Center, Workplace solutions and IoT, can address customer priorities such as revenue and business growth, operational efficiency, innovation, risk and compliance, data governance and sustainability.

Our Services

Our advisory services are designed around evaluating risk, compliance, and controls. Each service area is staffed by experienced and certified professional advisors and consultants dedicated to delivering the highest quality business appropriate solutions for your organization.

These services will help you develop security programs and to document policies and processes that translate the organization's business objectives, legal obligations, and risk appetite into actionable and specific guidance. This includes

- Security Control Assessments
- Vulnerability Assessment
- Identity & Access Management (IAM) Assessment
- Security Roadmap Development
- Security Testing: penetration, vulnerability
- Maturity Scoring and Benchmarking
