Intelligent Security

Logicalis Intelligent Security provides the intelligence needed to confidently make the best technology purchase decisions, maximize your security resources and investments, and reduce your overall risk—giving your organization the best chance to make its mark on the world.

When it comes to security, it can be confounding to make the right choices. But the wrong choices can put your business at risk. Here are some of the decisions that today's organizations face:

- Are we using the best security framework?
- Are governance and compliance being used to effectively manage security?
- How do we choose the right security tools from among the hundreds available?
- How do we stack up against our competitors in terms of security maturity?
- Most importantly, if we are attacked, can we quickly and cost effectively identify, remediate, and recover?

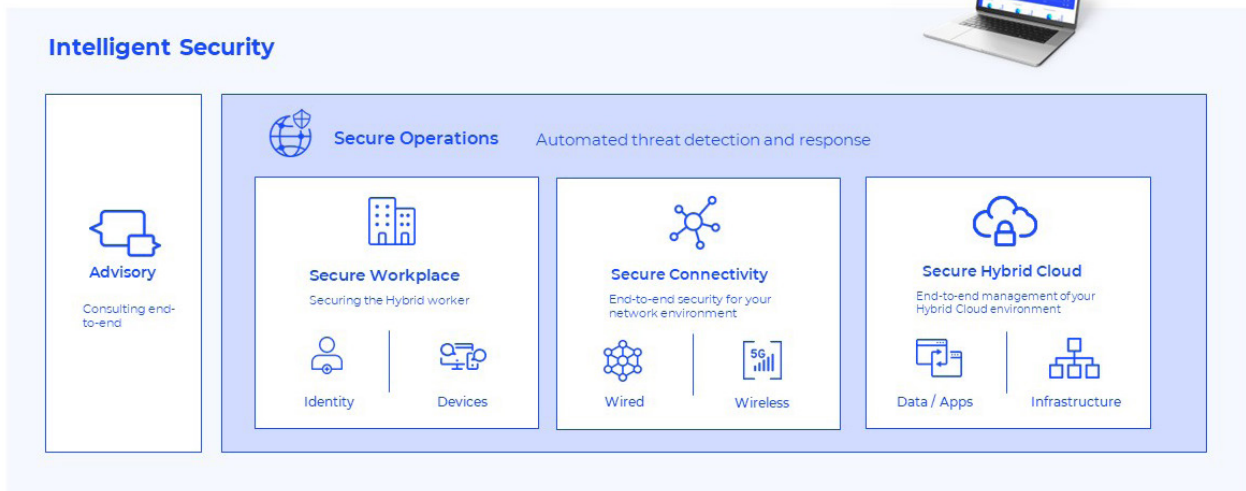

An award-winning managed services provider, Logicalis helps you navigate the complexities of today's security challenges by empowering you to enhance your security infrastructure and fortify business resilience. Logicalis has helped hundreds of customers address their security concerns by "managing the unmanageable"—or what we call Intelligent Security.

Build a sturdy security foundation

Logicalis Intelligent Security starts with choosing the right framework and instilling good governance and compliance practices to effectively manage security given your organization's risk tolerance. That is the true foundation of effective security. If you already have a preferred framework with governance and compliance in place, Logicalis can help refine it.

We'll then design a technical approach and recommend the best solutions—from among the hundreds available—to help you reduce risk and safeguard access. After implementing and integrating the solution into your environment, it's then continually tested and refined through our AIOps-powered managed services, enabling you to scale your business without sacrificing security.

Drive AIOps-powered visibility, efficiency, and effectiveness

Finally, for our Managed Services clients, Intelligent Security offerings are built on Logicalis' exclusive AIOps-powered Digital Fabric Platform to drive enterprise-wide visibility, efficiency, and effectiveness into your security environment.

They provide added peace of mind with:

- A pre-built, fully integrated platform with applications and business processes sewn in.
- AI and predictive capabilities that help us to identify and fix incidents before disruption occurs.
- A real-time digital dashboard that benchmarks performance against industry standards, shows where to focus your time, and provides actionable recommendations with related impacts.
- End-to-end process capabilities that automate highly repeatable and redundant tasks, leaving you to zero in on key strategic initiatives.

Services

Logicalis addresses all aspects of the security environment—from defining or refining your security strategy to providing employee training and awareness.
